San Francisco State University
CSC 648 - 848
Milestone 0 Submission Form
Section 6 Team 4

Github repo: https://github.com/ssohbn/SFSU-csc648-06-Fall26-team04
About page url: https://studysync.me/static/aboutPage.html

Hosting platform: namecheap spark vps
Operating system: debian trixie (13.7)
Database: sqlite 3.46.1
Back end technology: go 1.26.4 using stdlib 'net/http'
Front end: no framework html/css/js
Ai technology: chatgpt api

Vps access
ssh student@159.198.74.249
password: student

Database is sitting in the students home directory (database.sqlite3)

Tech familiarities and study plan (scores out of 5)

Tech	maeve	henry	jerald	shreya	aleksandr	simran
go	4	2	1	1		1
html	3	3	4	4		3
css	2	3	4	3		3
js	2	2	2	2		2
sql	3	3	2	2		1
chatgpt	2	3	3	3		4
STUDY PLAN (personal)	Touch up on go with the net/http basic server. Make	LEARN GO				

	basic database in sql and setup the vps					

Study plan

All of us will be expected to go over atleast https://go.dev/doc/tutorial/getting-started and https://go.dev/doc/tutorial/create-module and https://gowebexamples.com/http-server/ to understand the basic structure of our site as we get the 0th milestone submitted. Everyone can also write their own study plan however this should be sufficient generic knowledge for most of our project until we specialize more into our roles.
