Milestone 3
Nov 4

REMAINING P1 FEATURES
For m4 we want to work on polishing the ui more as the site is functional. There were some things that group members wanted to change involving clarity of group system.

Professor comments

There were minimal comments. Professor said it looked good but wants us to look into keeping it online after the semester is over. Keep refining.

Team's Action Plan Based on Feedback

Interests could show how many groups/members are in it for users to gauge popularity. Also would be nice if they could be organized by how many they are by default. Some of the interest search pages don't have search bar for topics on some pages, which we aim to fix

Studygroup edu system grouping is unclear. We may support filters by organization?

Online meeting links for groups are unclear after we added more support for physical locations

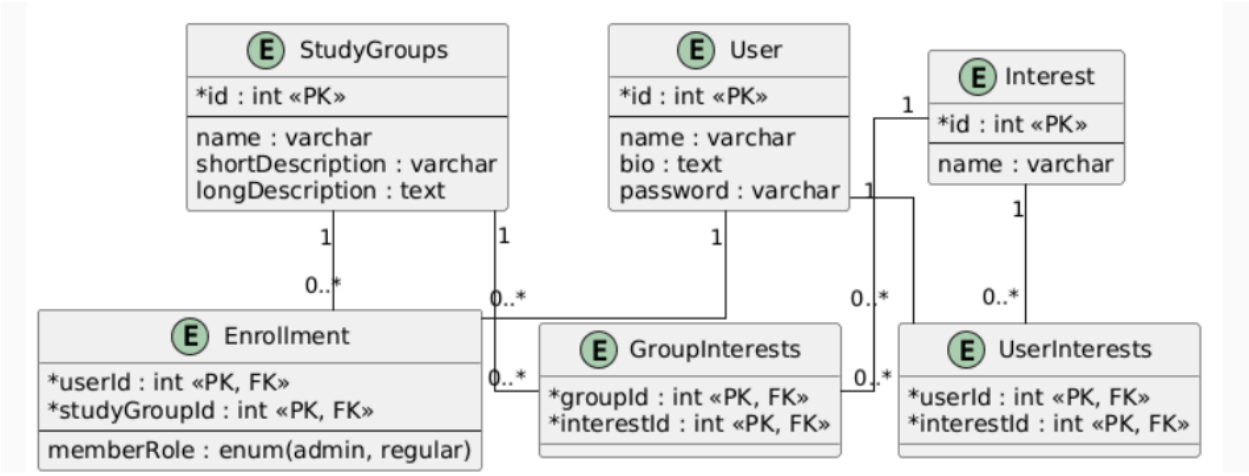

Maybe we will move interests to profile page

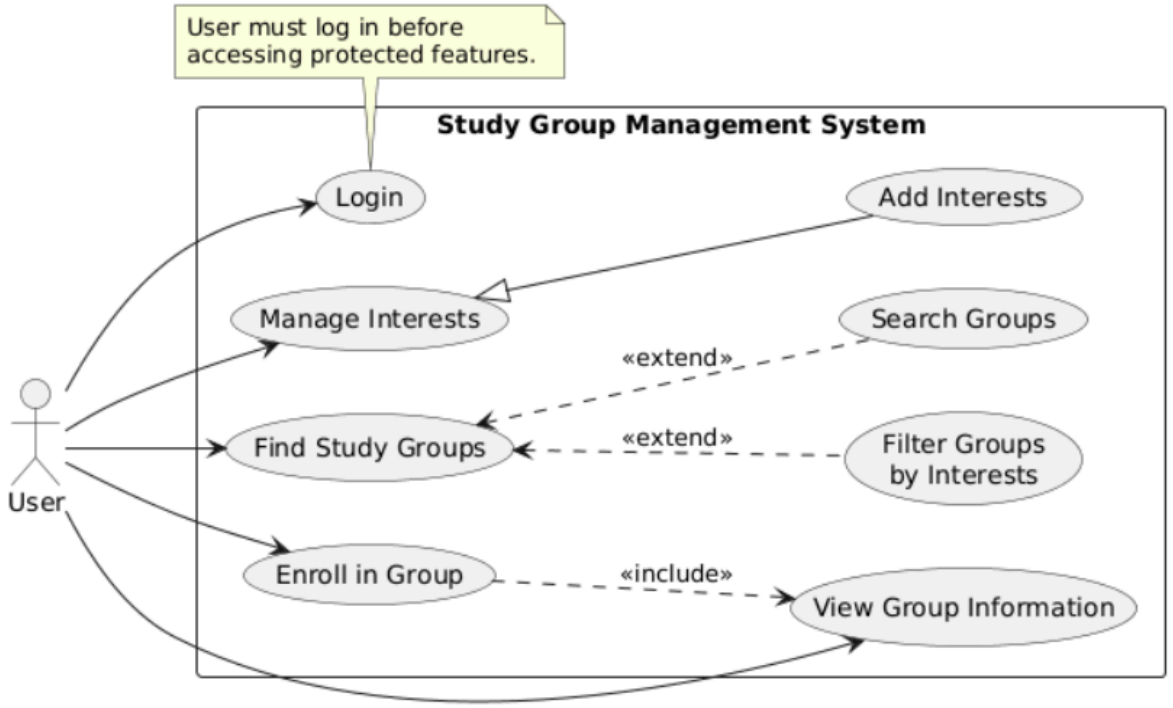

P1 features (same feature list as milestone 2)

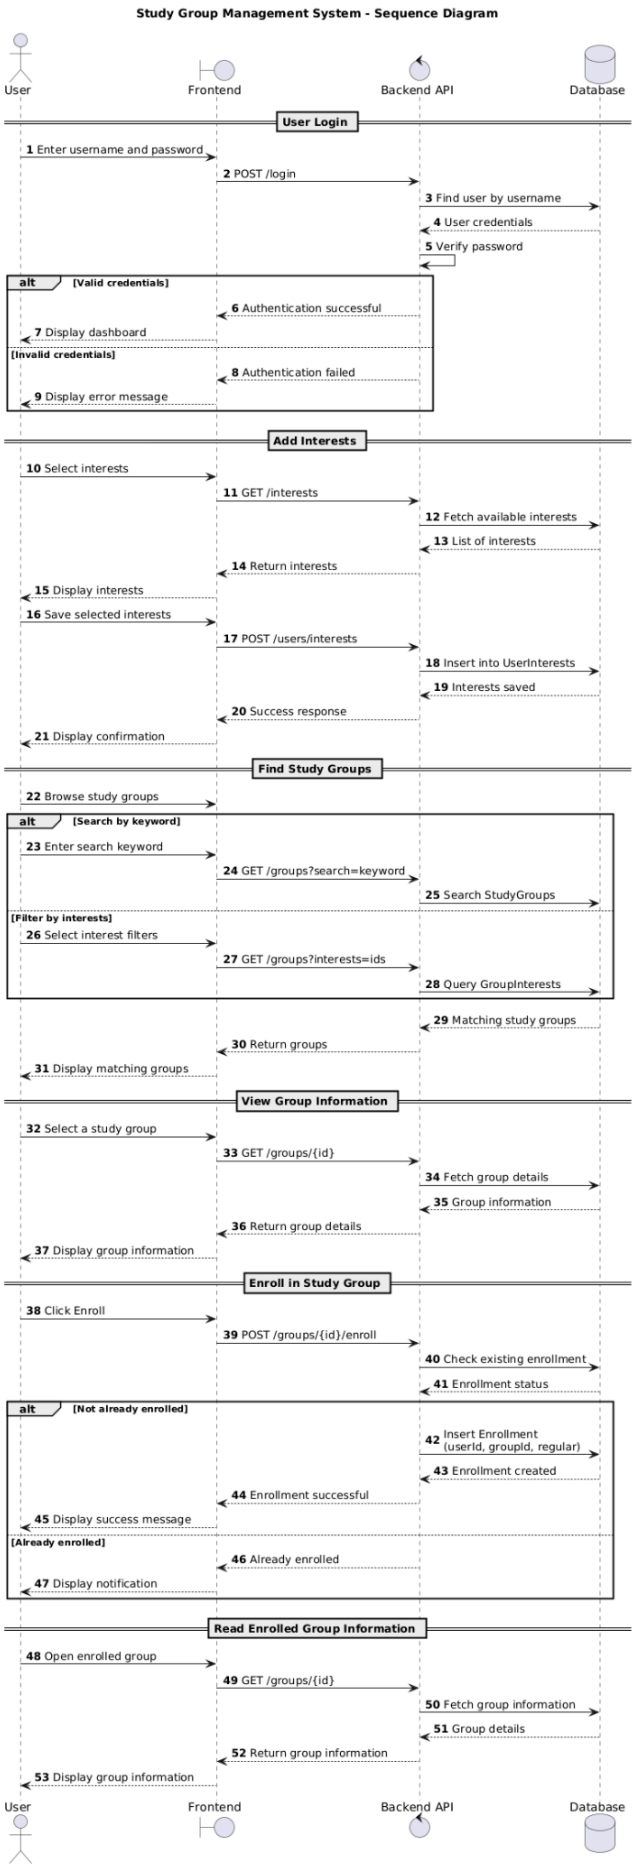

Requirement number	name	priority
1	Sign up	1
1.1	Edit bio	2
1.2	Add interests	1
2	Group system	1
2.1	Create groups	1
2.2	Enroll in groups	1
2.3	Edit groups	2
2.4	Group privacy	2
2.4.1	Open groups	1
2.4.2	Unlisted groups	1
2.4.2	Invite only groups	3
2.4.3	Group application	3
2.5	Group/user Interest enrolling	1

Requirement number	name	priority
2.5.1	Interest creation	1
3	Canvas calendar integration	2

Architecture

Risks

Our risks are seeing how we will keep up the project after school ends. We could keep paying for the server, but relative to the rest of the app, the ai is expensive. We use a free gemini plan now but that will run out and charge us, which we do not want. The ai might get stripped out. If we keep the service up for a long time. Maybe the user could provide their own ai but it isnt really a core feature of our project, so it might be fine to just remove after the class ends.
